

Payton Henry

Portfolio Website: <https://peh-portfolio.netlify.app/>

Beaumont, California / (951) 867-6922 / payton.e.henry04@gmail.com / LinkedIn: www.linkedin.com/in/payton-e-henry

Education

California Baptist University, Riverside, CA – Expected Graduation: June 2027

Bachelor's in Computer Science & concentration in Machine Learning and AI

Current Cumulative GPA 3.89

Experience

Salesforce Developer with CAiMLL

May 2025-Present | California Baptist University, Riverside, CA & NavalX TechBridge, Norco, CA

- Designing advanced Salesforce solutions using Apex, SOQL, Triggers, Flows, Lightning Web Components, and AI Agents through Agentforce to automate and enhance user workflows
- Develop AI agents using natural language processing and machine learning to use unique data querying and accelerate the process of report writing
- Build responsive Lightning Web Components using HTML, CSS, and JavaScript to create seamless user interfaces integrated within Salesforce
- Collaborating with researchers and software engineers to brainstorm, create, and optimize our Salesforce and AI solutions through iterative development and testing
- The project consists of rapid development, including version control with GitHub, Jira project management, and manifest-driven deployments across multiple Salesforce orgs using Salesforce CLI
- Contributed to a 10-person engineering team creating high-importance deliverables with weekly sprints
- Designed 10+ custom Salesforce data models as part of the engineering team, creating the schema foundation for a production system now tracking 35,000+ records
- Built the Lightning Web Component UI/UX layer for a GCP-powered recommendation engine, rendering 5,000+ match cards with pagination, score-based filtering, and card/table view toggling as part of a 4-person integration team

Projects

Salesforce & Slack AI Assistant | RAG-Powered Query Bot

May 27 - July 2, 2026

- Built a Retrieval-Augmented Generation (RAG) pipeline in Apex that routes natural language queries to relevant Salesforce object schemas via keyword classification, reducing prompt size and token usage on every call
- Integrated Google's Gemini API to translate natural language into SOQL and SOSL, enforcing strict read-only guardrails to block all DML operations
- Engineered a Slack OAuth 2.0 integration with nonce-based CSRF protection and Platform Cache, letting the assistant search and summarize real-time Slack conversation history alongside Salesforce records
- Developed a Lightning Web Component chat interface with live typing indicators, rolling conversation history, and dynamic Experience Cloud record linking

SnapDose | AI-Powered Diabetes Tracking App | Partnered with Ryan Stoffel

January 2026 - May 2026

- Built a React Native/Expo app with Firebase Authentication and Firestore, using security rules to keep each user's diabetes data private
- Engineered a serverless GCP pipeline where Firebase Storage triggers a Cloud Function that sends meal photos to the Google Gemini API, returning carb estimates, confidence levels, and detected food items
- Developed a Spring Boot REST API bridging the app to a simulated insulin pump on a Tab5 microcontroller, handling bolus dose requests, delivery confirmation, and heartbeat communication
- Integrated the Dexcom API to pull real-time continuous glucose monitoring data into a unified dashboard alongside meal tracking and insulin dosing
- Implemented Firestore offline persistence for local caching and built a bolus calculator with insulin-on-board tracking using exponential decay

Volunteer and Leadership Experience

October 2023 | Bournes Technology Center, Riverside, CA

STEP Convention

- Showcased engineering projects and led youth who were interested in engineering to inspire them to pursue their interests.

Technical Skills and Developer Tools

C++, JAVA, Js, CSS, SQL, HTML, Python, IntelliJ, Clion, Salesforce, Vs Code, Autocad, Flutter/Dart, React Native
